

Mountain Stream Countertop

The Mountain Stream Countertop stands conveniently on the sink for easy 'self' installation to the existing kitchen tap, using the special diverter valve provided.

All you need to do is choose a filter cartridge to suit your needs depending on what you want to remove from the water. With the correct cartridge this system has the capacity to remove chlorine, heavy metals and fluoride.

Ideal for situations where a permanent under bench installation may not be feasible or convenient, eg holiday homes, rental properties, or you may just want a short term solution. The bench top is a great option with flexibility in mind.

Also available in a Countertop Twin
